COVER SHEET SECTION

Provide the name, contractor company, and title of those who prepared and reviewed/approved this form in the signature box provided. The Area Co-Ordinator and OHS Engineer must review and approve the RAMS before the job may proceed. Any comments must be captured in this document.

Contractor Supervisor to Complete this Section:

ESS Division: NSS

Contractor: Motion Control and Automation Group

Job Description: Motion Test of BiFrost Spectrometer

Work Order No: 340416

Prepared By: Thomas Gahl

Email: Thomas.Gahl@ess.eu

Date Submitted (dd/mm/yy): 21/04/21

INSTALLATION REVIEW

Owner: Installation Package Leader: Liam Whitelegg

[illegible]

All persons expected to work on the installation detailed within, shall sign the table below to confirm they have read and understood this RAMS including appendix information.

[illegible]

How will information be communicated and explained to work force

	Y/N	
RAMS Communicated	Y	
Pre-Job Briefings	Y	

2. METHOD STATEMENT

In-Kind Contributor/Contractor to enter information about equipment and materials to be used for the specific job.

Spectrometer Tank from AVS has arrived. As part of the SAT, the tank needs to be rotated on its motion stage within the cave

2.1. Description of Task/Process:

If the work is part of an Installation Binder, then align with Chapter 01 in that binder and detail:

If the work is not part of an Installation Binder, then describe below:

This work is part of IB378 – Spectrometer Vessel and Motion System.

There are two parts to this work – Pre installation checks and then SAT after installation

2.2. Sequence of work

(step by step) and the duration of each (align with Installation Binder):

Link to Chapter 3 of the Installation binder if used.

Sequence	Duration [hours or days]
Pre-Installation Checks	
Connect test crate to temporary power	10min
Connect motor, encoder and switch cables to components	50min
Check limit switch engagement through manual engagement of switch	10min
Remove restraining brackets	10min
Check motor operation	20min
Check encoder readout	10min
Re-attach brackets	10min
After tests are completed, disconnect components and remove power to crate	60min

SAT	
Connect test crate to temporary power	10min
Connect motor, encoder and switch cables to components	50min
Remove restraining brackets	10min
Repetition of pre-installation checks	3hours
Repetition of Tests in ESS-3208331 without load	2days

2.3. Temporary services

If temporary services are required i.e. scaffold, site logistics etc. detail below:

[Link to Chapter 5 of the Installation binder if used](#)

Temporary power, motion test crate and laser tracker

2.4. Training

Who will carry out the works and detail training i.e Lifting & Slinging /Forklift /
Harness / Working at Height etc.

[Link to Chapter 8 of the Installation binder if used](#)

Operative Name	Training Required (e.g. Hot Work)	Training Received (Y/N)
Anders Sandström	N/A	N
Federico Rojas	N/A	N
	N/A	N
	N/A	N

2.6. Personnel protective equipment

*Mandatory PPE

Personnel Protective Equipment required Yes/No:			
Safety Helmet*	Y	Harness and Lanyard	N
Safety Boots*	Y	Dust Mask	N
High Visibility Vest*	Y	Welding Mask	N
Gloves (TYPE-suited to task) *	Y	Hearing Protection	N
Safety Glasses*	Y	Personal Oxygen Deficiency monitor	N
Goggles / Face-Shield	N	Personal dosimeter	N

2.7. Permits, Rescue plans and Authorizations

Indicate below what additional specific permits, rescue plans and/or authorizations will be required for this RAMS:

This only indicates what is needed and will have to be requested/applied separately, highlight with Y/N. Link to Chapter 8 of the Installation binder if used

Permit	Required	Permit	Required
Hot Works Permit	N	Electrical Works	N
Confined Space Work Permit	N	Electrical Lock out/Tag Out	N
Out of Hours Permit (if necessary)	N	Energisation Request	N
Radiological Permit	N		
Roof access Permit	N		
Ladder Permit	N		
Rescue plans	Required	Authorizations	Required
Work with Safety Harness Rescue Plan	N	Authorization for the use of: MEWP, Forklift, Crane	N
Rescue plan confined spaces	N		

If Electrical work and/or LOTO is required, please complete Permit request in EAM Work Order system and please consider electrical hazards in the risk assessment in section 2.

2.8. Adjacent Areas

Protection system for third party incl. public, adjacent workers etc.: (Fencing off areas, noise, flash from welding etc.)

Operative	Adjacent Areas

2.9. Temporary amendments

If Temporary amendments to escape routes, fire alarm, client rules etc. are required then detail below:

NO

2.11. Emergency procedures

incl. first aid arrangements:

Procedure	Institution/Authority	Reviewed?
<p>EMERGENCY NOTICE</p> <p>Secure the Area</p> <p>Raise alarm and isolate the incident if possible whilst ensuring your own safety</p> <p>Evacuate the Area</p> <p>When an evacuation alarm sounds, or when it becomes obvious that evacuation is required, evacuate the building through the nearest emergency exit</p> <p>Call 112</p> <p>Give following address to 112 for the Gate Guard position Partikelgatan 2, 224 84 Lund <small>Latitude: 55.794190 Longitude: 13.247452</small></p> <p>Specify what has happened. Follow instructions from 112 and let 112 end the call</p> <p>Give First Aid</p> <p>Take care of the injured and provide with necessary assistance if possible</p> <p>Contact gate guard and meet the Municipal Rescue Services</p> <p>Contact the Gate Guard telephone, +46 72 179 2260, indicating the incident location. Ensure that someone goes to the Gate Guard and meets the Municipal Rescue Services or Police to guide them to the incident.</p> <p>Report to Local Supervisor or Area Co-ordinator</p> <p>Inform your local supervisor or Area Co-ordinator about what has happened</p>	ESS Emergency Notice	Yes
Contact person when working with MEWP		
Name:	Telephone number:	
First Aid Training including CPR	Institution/Authority	Training Received
No available training due to Covid-19	ESS	
Call gate guard to get first responders		

ESS strongly advises to have at least one person per working group trained in First Aid and CPR. This training becomes mandatory when working outside normal working hours.

2.13. Chemical & Substances – Safety Data Sheet (SDS):

These may be described as cleaners, paints, solvents, lubricants, gases, aerosols of any kind, greases, cement and its additives and supplementary Control of Substances Hazardous to Health Assessment may be required.

Product Name	Used For	Form: Liquid/Gas/Solid	Container Size	SDS Attached Yes / No

APPENDIX

Risk Assessment guidance

- 1.1 Define Scope and limitations
- 1.2 Describe the location for activity or task by stating the building name or number and area if applicable
- 1.3 Break the activities down into steps - Clearly and precise
- 1.4 Determine the hazards associated in column **What is the hazard?** Can be input from the Hazard identification checklist ESS-1713369 [1] or similar.
- 1.5 Next step is to state the possible consequence the Hazard could cause in column **What is the possible Consequence?** (What potential harm e.g. injury, fire, occupational health disease can the hazard cause)
- 1.6 Carry out the **Initial risk rating** of the hazard according to 1.6.1, 1.6.2 and 1.6.3
 - 1.6.1 Considering the hazards involved without any controlling measures, determine the worst credible severity of an incident by using **Risk Matrix** 5x5. Write the severity number in column **S** (Severity).
 - 1.6.2 Considering the hazards involved without any controlling measures being in place, determine the likelihood that an incident will result from this job step by using the **Risk Matrix** 5x5. Write the likelihood number in column **L** (Likelihood)
 - 1.6.3 Colour occurs in column Risk in the corresponding table colours for Low, Medium and High to highlight the level and make it simple to see and understand.
- 1.7 Repeat steps 1.4-1.6 for each of the activities identified.
- 1.8 List any control measures that will be taken to ensure that step is done safely in column **Mitigations to control risk**. Use the Table **Risk reduction strategy with control measure examples** [2] down below provided to help your evaluation about different types of controls and their effectiveness at reducing risk. The Severity of an accident usually remains the same. It is only the likelihood score that will change following controls.
- 1.9 Once all controls are described follow the same process in 1.4-1.6 to complete the severity, likelihood and residual risk that potentially remains after mitigation- Residual risk

Risk reduction strategy with control measure examples

	Control	Examples
Least Effective	PPE	<ul style="list-style-type: none"> √ Safety glasses √ Hearing protection √ Hardhat √ Gloves
	Administrative	<ul style="list-style-type: none"> √ Work rotation to minimize exposure √ Inspect safety equipment √ Good housekeeping practices √ Training and supervision
	Warning	<ul style="list-style-type: none"> √ Signs √ Backup alarms √ Horns √ Beebers
	Engineering/Isolation	<ul style="list-style-type: none"> √ Ventilation √ Machine guarding √ Enclosures √ Circuit breakers
	Substitution	<ul style="list-style-type: none"> √ Use latex rather than oil-based paints √ Reduce energy, such as speed, force, amperage, pressure, and temperature √ Use water-based detergents instead of organic solvents
Most Effective	Elimination	<ul style="list-style-type: none"> √ Remove a dangerous machine from service √ Remove the hazard altogether

Risk Matrix

This risk matrix is suitable for assessment of conventional hazards occurring during task based activities at ESS. A consequence/likelihood matrix is used to assess the relative magnitude

		Severity (S)				
		1	2	3	4	5
Likelihood (L)	1	A	A	L	M	M
	2	A	A	L	M	H
	3	A	L	M	H	H
	4	L	M	M	H	H
	5	M	M	H	H	H

Severity categories (S)	
Score	Description
1	No injury
2	Minor -Injuries that can be treated with a first aid kit
3	Major -Injuries requiring the support of emergency services or a reportable injury
4	Single fatality
5	Multiple fatalities
Likelihood categories (L)	
Score	Description
1	Highly improbable- Would not be expected to occur
2	Unlikely
3	Remote
4	Occasional
5	Frequent-Expected to happen

Risk categories	Action required
Acceptable(A)	If the risk is considered low and provided the correct processes are followed no further control measures are considered necessary. Work can proceed
Low (L) Risk (Green)	If the risk is considered low and provided the correct processes are followed further control measures should be considered if low or minimal cost. Work can proceed
Medium (M) Risk (Orange) Mitigation needed	If risk is considered medium and further control measures will be in place to reduce the risk. After the control measures are put in place, the risk will be re-assessed to determine the impact of the risk with the control measures in place. Work could proceed upon further evaluation.
High (H) Risk (Red) Unacceptable	If the risk is considered high, no work will take place until control measures are in place to reduce the risk. After mitigations are considered, if the residual risk remains high, work will not commence, alternative solution need to be considered.
